Per the Green Loan Principles’ “Management of Proceeds” component: proceeds (or an equivalent amount) shall be credited to a dedicated account or otherwise tracked; a facility cannot be labelled green if it mixes a green and non-green tranche — only the tranche(s) aligned to all four GLP components may carry the green label.

Quantify wherever feasible. Reports should show expected AND, where feasible, achieved impact — not projections alone.

This intake form is GreenGru’s own working document — it consolidates PBOC’s official 12-category green-loan taxonomy (银发〔2018〕10号/ 银发〔2019〕32 6号), disclosure fields typical of green-loan interest-subsidy schemes, the enterprise carbon-account financing procedure in T/GZGFA 1—2024 (广州市绿色金融协会), and the four core components of the LMA/APLMA/LSTA Green Loan Principles (26 March 2025 edition) — Use of Proceeds, Process for Project Evaluation & Selection, Management of Proceeds, and Reporting. It is not an official bank or PBOC form; the SME still needs the lender’s own application paperwork, and any government subsidy still requires the exact form published for that scheme’s specific application window. The GLP fields are only relevant where the loan will also be assessed against that voluntary international standard — not every domestic loan needs them.
